User requests to Check or Update Campaign Plans in the app

Sends back the saved campaigns or update campaigns according to the user's request

App data storage

User sents customer info to the server from the JerryRat app to see if the specified customer is worth taking time to call them for a promotion.

The server calls an inquiry on the databse to check and update the customer's info.

The server sents result back to the client.

Return the result predicted by the ML model.
